DAF Products Inc.
Lamination & Coating Specialists

Installation: Clean application surface. In some cases for small applications product can be applied dry. Otherwise a small amount of Application fluid can be used on non-laminated Window Film to assist with install. Applying starting at the top while holding the graphic away from the glass; tack the top edge so this it is straight, begin working down the graphic with a smooth squeegee, roller or like device. Area's that are prone to premature release are corners and edges where graphic meets the windows edge. This is where glass sealant, dirt and moisture gather. Adhesion can be improved by not applying completely to windows frame but leaving a small gap. Also, additional cleaning of the windows edges to removing any dirt, dust and sealant will help. Note DO NOT use Ammonia based Glass cleaner. TIP: because of holes there is less surface area to apply resulting in a greater opportunity for release, especially on vehicle windows near edges. Therefore we recommend applying ¼" clear tape around the edge of windows after the film has been installed. This will help prevent edge lifting.

Avery 900 Supercast Light Control Films

Diffuser Films applied onto flexible and rigid substrates balance the light distribution of a backlit sign and eliminate the issue of hot spots.
White 30% Diffuser Film diffuses 30% of light and blocks out the remaining 70%. White 60% Diffuser Film diffuses 60% of back lit light and blocks 40%.

Blockout Films are designed to provide complete light blocking characteristics. White exhibits a uniformly lustre white finish and is uniformly black on the adhesive side. Black has a black lustre finish with a uniform white coating on the adhesive side.

SIGN PAINTS

1 Shot Lettering Enamel

1 Shot® lettering enamels are oil based, high gloss enamels for interior and exterior use on metals, wood and glass. They have been the benchmark in lettering enamels for over 50 years. Excellent flow characteristics, single stroke coverage and vibrant durability are just a few of the reasons 1 Shot® lettering enamels remain the favorite of pinstripers and sign painters alike. With their infinite color blendability and full line of reducers and hardeners, it's no wonder 1 Shot® lettering enamels are used by more sign and graphics professionals than any other brand.

Preparing MDO & RTG Boards

On unprimed MDO clean the surface thoroughly, then scuff lightly with an abrasive pad. Paint on Primer.

On pre-primed MDO, after using a tack rag to remove any residual sanding dust, roll on your Lettering or Bulletin Enamel.

Apply two light coats, as opposed to one heavy coat. Sand lightly with 230-sand paper between coats for good adhesion. If you get little bubbles in the surface, (usually from using a foam roller) immediately re-roller, but slightly "lift" on the roller frame, taking virtually all the pressure off the roller. Thinning the enamel will help it flow out.

Be sure to seal your edges with primer and paint.

Econolite® - Single Face Aluminum • Corrugated Core

This corrugated plastic core with aluminum laminate panel offers lightweight weather and fire resistant properties appropriate for outdoor commercial, industrial or retail signs. These aluminum to plastic panels are specially useful in areas that require water resistance. Panels do not swell, wick water or corrode from the inside. Econolite panels come raw edged for insertion into mounting systems, edge cap or raw edge applications. (Second side is mill finish aluminum.)

Magnetic Care and Instructions – Q&A

Q: Do vehicles need special preparation before applying magnetic signs?
A: Make sure paint is perfectly clean, dry and waxed where the sign is to be placed. Check the back of the sign to make certain it is free of debris.

Q: What is the best way to apply a magnetic sign?
A: Let one edge of the sign contact the vehicle in the desired position. Let the magnetic power do the work as it pulls the sign into place from the edge where you started to the edge of the opposite side. If the sign is not exactly where you want it, peel it off, reposition the starting edge and repeat steps. Make sure the entire surface of sign sits smoothly against the vehicle with no air pockets. During winter the temperature of the sign should be about 50º F during installation, but the temperature of the vehicle surface does not matter.

Q: Do any surfaces present problems?
A: Some newer vehicles have aluminum panels which magnetic will not adhere. Care should be taken with wood grain paneling and metallic finishes. These surfaces should be checked weekly for the first 90 days of use. A generous waxing of both the surface where the sign will be placed and back of the sign itself will help prevent damage. Do not put signs on fresh paint work. Make certain the paint has cured before applying sign.

Q: What sign maintenance is recommended?
A: Remove the sign weekly, cleaning and wiping dry both the magnetic side and the surface of the vehicle. This keeps moisture from collecting, which can potentially damage a vehicles surface. Keep the sign free of road dirt and debris. Remove sign and wipe dry after snowfall and rain.

Q: What special precautions must be taken in storing signs?
A: Avoid wrinkling by storing in a 3" diameter roll with the printed side out, or store the sign flat. Avoid curls or stress on the signs.

Q: Any additional tips or suggestions?
A: Do not wash vehicles with signs in place. Vehicles using signs in areas of lawn chemical treatments, salt water spray, road salt, etc. should be maintained as outlined above. Corner rounding prevents dog- eared corners. Customs shapes should utilize rounded contours rather than sharp angles. There is no warranty expressed or implied against loss of signs or damage to vehicle surfaces. User is responsible for how signs are cared for, altered, stored and or used, or the surface to which the signs are applied.

Signicade

All plastic sign frame with recessed sign area. Holds two signs (or sign faces can receive vinyl sheeting with surface preparation.) Metal, Coroplast™ or acrylic sign blanks must be attached.
