FlexPRINT 2160 Printable HTV

POLI-TAPE® FLEXPRINT 2160 Semi Gloss offers a semi-gloss to full-gloss finish with excellent stretch and long-lasting durability. The film retains its rebound through multiple wash cycles. Thanks to its specific composition and optimized press settings, it partially prevents dye migration (bleeding) on polyester and poly-blend fabrics. Suitable for both light and dark textiles, this film delivers a smooth semi-gloss appearance.

Printability:

FLEXPRINT 2160 BLOCKOUT is compatible with current printers using eco-solvent, solvent, UV and latex inks.

Suitable Fabrics:

* Pre-Shrunk Cotton
* Uncoated Polyester
* Polyester/Acrylic
* Poly-cotton
* Linen
* Wool

Transfer Conditions: Time - 15 seconds (UV Inks 20 seconds)
Temp - 275F - 135C (Press 50 PSI)

Avery 900 Supercast Light Control Films

Diffuser Films applied onto flexible and rigid substrates balance the light distribution of a backlit sign and eliminate the issue of hot spots. White 30% Diffuser Film diffuses 30% of light and blocks out the remaining 70%. White 60% Diffuser Film diffuses 60% of back lit light and blocks 40%.

Blockout Films are designed to provide complete light blocking characteristics. White exhibits a uniformly lustre white finish and is uniformly black on the adhesive side. Black has a black lustre finish with a uniform white coating on the adhesive side.

Preparing MDO & RTG Boards

On unprimed MDO clean the surface thoroughly, then scuff lightly with an abrasive pad. Paint on Primer.

On pre-primed MDO, after using a tack rag to remove any residual sanding dust, roll on your Lettering or Bulletin Enamel.

Apply two light coats, as opposed to one heavy coat. Sand lightly with 230-sand paper between coats for good adhesion. If you get little bubbles in the surface, (usually from using a foam roller) immediately re-roller, but slightly "lift" on the roller frame, taking virtually all the pressure off the roller. Thinning the enamel will help it flow out.

Be sure to seal your edges with primer and paint.

Econolite® - Single Face Aluminum • Corrugated Core

This corrugated plastic core with aluminum laminate panel offers lightweight weather and fire resistant properties appropriate for outdoor commercial, industrial or retail signs. Magnetic Care and Instructions – Q&A

Q: Do vehicles need special preparation before applying magnetic signs?
A: Make sure paint is perfectly clean, dry and waxed where the sign is to be placed. Check the back of the sign to make certain it is free of debris.

Q: What is the best way to apply a magnetic sign?
A: Let one edge of the sign contact the vehicle in the desired position. Let the magnetic power do the work as it pulls the sign into place from the edge where you started to the edge of the opposite side. If the sign is not exactly where you want it, peel it off, reposition the starting edge and repeat steps. Make sure the entire surface of sign sits smoothly against the vehicle with no air pockets. During winter the temperature of the sign should be about 50º F during installation, but the temperature of the vehicle surface does not matter.

Q: Do any surfaces present problems?
A: Some newer vehicles have aluminum panels which magnetic will not adhere. Care should be taken with wood grain paneling and metallic finishes. These surfaces should be checked weekly for the first 90 days of use. A generous waxing of both the surface where the sign will be placed and back of the sign itself will help prevent damage. Do not put signs on fresh paint work. Make certain the paint has cured before applying sign.

Q: What sign maintenance is recommended?
A: Remove the sign weekly, cleaning and wiping dry both the magnetic side and the surface of the vehicle. This keeps moisture from collecting, which can potentially damage a vehicles surface. Keep the sign free of road dirt and debris. Remove sign and wipe dry after snowfall and rain.

Q: What special precautions must be taken in storing signs?
A: Avoid wrinkling by storing in a 3" diameter roll with the printed side out, or store the sign flat. Avoid curls or stress on the signs.

Q: Any additional tips or suggestions?
A: Do not wash vehicles with signs in place. Vehicles using signs in areas of lawn chemical treatments, salt water spray, road salt, etc. should be maintained as outlined above. Corner rounding prevents dog- eared corners. Customs shapes should utilize rounded contours rather than sharp angles. There is no warranty expressed or implied against loss of signs or damage to vehicle surfaces. User is responsible for how signs are cared for, altered, stored and or used, or the surface to which the signs are applied.
